11. TOXICOLOGICAL INFORMATION

Toxicity	Silicic acid, sodium salt: When tested for eye and skin irritation potential, a similar material caused moderate irritation to the eyes and moderate irritation to the skin. Another study reported adverse effects to the kidneys of dogs fed sodium silicate in their diet at 2.4g/kg/day for 4 weeks, whereas rats fed the same dosage did not develop any treatment-related effects. Frequent ingestion over extended periods of time of gram quantities of silicates is associated with the formation of kidney stones in humans.
